EDITORIAL ASSISTANTS AT AIP
SUPERVISOR, JOURNAL PUBLICATIONS: M. Koch; SENIOR COPY EDITOR: A. H. Friedman; COPY EDITORS: T. Tin and E. Weintraub.

The *Journal of Applied Physics* is devoted to general physics and its applications to other sciences, to engineering, and to industry. Prior to 1937, the Journal carried the name *Physics*.

The *Editor* welcomes articles of two kinds: (1) articles describing significant new results in experimental or theoretical physics related to applied physics; and (2) articles describing important new applications of physics to other branches of science and engineering. Although the Journal infrequently carries critical review articles, the Editor will be pleased to receive inquiries from authors who are contemplating the preparation of such reviews in fields covered by the Journal.

Submission of a manuscript is taken by the Editor to be the author's representation that the manuscript is not currently under consideration by another journal, and that it has not been copyrighted, published, or accepted for publication elsewhere.

Communications (formerly Letters to the Editor) are welcome. These should be short: the normal maximum is about five double-spaced typewritten pages or three Journal columns including allowances for figures, references, and tables. "Communications" should be reasonably self-contained and not mere announcements of proposed research or of more comprehensive studies to be published later. They do not carry abstracts. Being short, "Communications" are often published more quickly than full-length regular articles.

Applied Physics Letters. Short contributions whose timeliness and importance justify very quick publication should be sent to Applied Physics Letters. For information on their preparation, refer to that Journal.

Manuscripts. Manuscripts should be submitted to the Editor, Frank E. Myers, Journal of Applied Physics, Argonne National Laboratory, Box 296, Argonne, Illinois 60440. *Before* you prepare your manuscript, please read *Information for Contributors*, facing page 1 of the January 1966 issue of the Journal of Applied Physics.

Publication charge. Authors' institution are requested to pay a charge of $50 per page ($50 minimum for "Communications") plus a $10 charge per article which helps to defray the cost of its abstracting and indexing in Physics Abstracts. "Publication charge and reprint order" forms will be sent with galley proofs.

Corrected proofs and all correspondence concerning papers in the process of publication should be addressed to the Supervisor, Editorial Department, American Institute of Physics, 335 East 45 St., New York, New York 10017. Reference must be made to title, author, journal, and scheduled date of issue.

SUBSCRIPTIONS, RENEWALS, and ORDERS FOR BACK NUMBERS should be addressed to the American Institute of Physics, 335 East 45 St., New York, N.Y. 10017.
